

ABB MEASUREMENT & ANALYTICS | DATA SHEET

ProcessMaster FEP630

Electromagnetic flowmeter

Measurement made easy

The first choice for all industrial applications

Diagnostics for real-life situations

- To keep your process up and running
- Gas bubble, partial filling or empty pipe detection, electrode impedance, conductivity and sensor temperature monitoring
- Clear text messages for simplified troubleshooting

On board health check

- Flowmeter sensor and transmitter integrity check utilizing fingerprint technology

Noise / Grounding check

- Verify the installation is correct from day one

Service interval monitoring

- Receive timed notifications

Backwards compatibility

- Protect your investment in ABB flowmetering

ProcessMaster series

ProcessMaster is available in two series – ProcessMaster 610 the good fit for everyday applications and ProcessMaster 630 the first choice for all process industry applications delivering best in class functionality and options.

Applicability	FEP610 series	FEP630 series
	Good fit for everyday applications	The first choice for all industrial applications
Chemical Industry Corrosive liquids, acids, bases	✓	✓
Power Coal slurry, Lime slurry, Cooling	✓	✓
Mining Abrasive slurries, hydraulic transport	✓	✓
Pulp & Paper Stock Flows, Latex, Clay, Liquor, Chemicals	Up to 2 % Stock	Up to 4 % Stock
Oil & Gas High pressure applications	✓	✓
Food & Beverage Hygienic applications	✓	✓
Measuring medium minimum conductivity	20 µS/cm	5 µS/cm
Measuring medium temperature	Up to 130 °C (266 °F)	Up to 180 °C (356 °F)
Pressure	≤ PN 40 / CI 300	≤ PN 40 / CI 300, option for high pressure
Hazardous area	–	Yes

Features	FEP610 series	FEP630 series
Accuracy	0.5 %	0.4 %, Option up to 0.2 %
Nominal diameter	DN 3 ... 2000 (1/8 ... 80 ")	DN 3 ... 2000 (1/8 ... 80 ")
Liner material	PTFE, Rubber, PFA, ETFE	PTFE, Rubber, PFA, ETFE, Ceramic Carbide Linatex
I/O's	1 x analog, 2 x digital	1 x analog, 2 x digital, Option for add-in modules
Communication	High Speed Infrared Port Communication based on HART DTM	HART, PROFIBUS, Modbus
Process diagnostics	Empty pipe	Empty pipe, Partially filling, Gas bubbles, Electrode Impedance, Conductivity, Sensor temperature
Backwards compatibility	–	Yes

... ProcessMaster series

Features and Functions

On-board Health Check

ProcessMaster's in-built fingerprint technology helps to ensure Sensor and Transmitter Integrity without the need to remove the flowmeter from the process. The Check provides a pass / failed result based on a comparison of the current flowmeter status to a set of reference data.

Benefits:

- Easy to operate
- No additional equipment required
- No training necessary
- Quick check of flowmeter integrity

Backwards Compatibility saves your Investment in ABB Flowmetering

Take advantage of new features and improved performance. Switch to the new product at your own timeline. Minimize the cost of change in stock keeping, documentation and change of internal processes.

Benefits:

- Drop in replacement
- Same terminal designation I/O's, sensor connections
- No need to change wiring documentation
- Sensor cable stays unchanged
- Identical operating philosophy:
Easy Set-up and Sensor Set-up
- Common user experience, less training
- Less inventory, less cost

Diagnostics for real-life situations

Detecting critical process conditions at an early stage helps reducing unscheduled downtime and maintenance. Clear text messages simplify troubleshooting. Device diagnostic information can be accessed without any intervention – either through the HMI or bus communication.

Benefits:

- Peace-of-mind that flowmeter is operating within its specification
- Prioritized alarms to correct most important alarm first
- Through-the-glass operation without the need to open the housing

Verify the Installation is correct - from day one

Improving quality and reducing cost can be a challenge if the flow measurement is unstable. A proper grounding is fundamental to an accurate electromagnetic flow measurement. ProcessMaster's in-built noise / grounding check helps getting the wiring / grounding right from day one without the need for further Tools.

Standard functionality**Flowmeter sensor coil inductance**

A measurement of the flowmeter sensor coil inductance can be triggered. This enables to check for the flowmeter sensor coil integrity.

Noise check / Grounding check

This function allows checking for noise and proper electrical grounding of the device. While the check is in progress, no flow measurement can take place.

Pre-requisites using the functionality:

- Flowmeter sensor must be completely filled
- No flow must occur in the flowmeter sensor

Fingerprint

The 'fingerprint' database integrated in the transmitter allows for comparison of the values at the time of factory calibration or commissioning with the currently recorded values.

A quick 'on-board health check' resulting in a pass / fail information can be performed.

For an in-depth verification, an external tool is available from ABB (in preparation).

Detection of partial filling

A partially filled sensor affects the flowmeter reading and the measuring accuracy.

If the flowmeter sensor is ordered with a full pipe detection electrode, which is located at the Top of the sensor, the transmitter's 'Diagnosis TFE' function enables for an alarm in case the sensor tube starts to become partially filled.

Pre-requisites using the functionality:

- Nominal diameter: > DN 50 (> 2")
- Flowmeter sensor design level A
- Conductivity of the measuring medium: 20 ... 20000 µS/cm

Installation conditions:

- The flowmeter sensor must be installed horizontally with the terminal box pointing upward.

Verification

There is an Option for an in-depth verification of the device using an external Tool from ABB.

This Tool provides a brief documentation of the Verification results allowing for a print out.

... ProcessMaster series

Optional diagnostic functions

The extended diagnostics functionality package contains the following functions.

Gasbubble detection

Gas bubbles in the fluid effect the flowmeter reading and the accuracy.

Enhanced diagnostics feature the option for gas bubble detection to make the flow measurement most reliable. There is the option for a gas bubble alarm triggered once the actual gas bubble value exceeds the threshold configured. This alarm is shown in the HMI. The digital output flags an alarm if configured accordingly.

Pre-requisites using the functionality:

- Nominal diameter: DN 10 ... 300 (3/8 ... 12").
- Conductivity of the measuring medium: 20 ... 20000 $\mu\text{S}/\text{cm}$.

Installation conditions:

- The flowmeter sensor can be installed either horizontally or vertically. Vertical installation is preferred.

Conductivity monitoring

The conductivity of the fluid can be monitored setting minimum / maximum alarm limits.

Once alarm limits are exceeded, the digital output flags an alarm if configured accordingly.

Conductivity is available as a 4 ... 20 mA output (Option card).

Pre-requisites using the functionality:

- Conductivity of the measuring medium: 20 ... 20000 $\mu\text{S}/\text{cm}$.

Electrode impedance

An Impedance measurement between the electrode and ground can be triggered.

This enables to check for the electrode integrity.

Flowmeter sensor temperature

A flowmeter sensor temperature measurement can be triggered.

This enables to check for the flowmeter sensor temperature. With flowmeter sensor temperature out of spec, the digital output flags an alarm if configured accordingly.

Transmitter in-house temperature

A in-house temperature measurement can be triggered.

This enables to check for the temperature inside the transmitter housing.

With the temperature out of spec, the digital output flags an alarm if configured accordingly.

Batching function

Figure 1 Fill function (batch)

Pos.	Description
①	Supply tank
②	Flowmeter sensor
③	Start / stop fill operation (digital input with plug-in card)
④	Filling valve
⑤	Container to be filled
VO	Valve open (filling started)
VC	Valve closed (fill quantity reached)
t_1	Valve closing time
t_2	Overrun time

Table 1 Legend

The optional batching functionality allowing for batches with filling times >3 seconds.

Batch quantity is configurable and batch process can be started using the digital input (Option card).

Once batch quantity is reached closing the valve can be triggered using the digital output.

Batch quantity correction is calculated measuring the overrun quantity.

Low flow cut-off can be configured, if required.

Overview – models with Ex protection

Version with integral mount design

The transmitter and the flowmeter sensor form a single mechanical entity.

The transmitter is available in two housing designs

- Single-compartment housing

This is suited for use in ATEX/IEC Ex Zone 2, 22, FM Cl1 Div 2.

In the single-compartment housing, the electronics chamber and the connection chamber in the transmitter are not separated from each other.

- Dual-compartment housing:

This is suited for use in ATEX/IEC Ex Zone 1, 21 und 2, 22, FM Cl1 Div 1.

In the dual-compartment housing, the electronics chamber and the connection chamber in the transmitter are separated from each other.

Note

Further information on the Ex Approval of devices can be found in the type examination certificates or the relevant certificates at www.abb.com/flow.

Measuring principle

Measurements performed by the electromagnetic flowmeter are based on Faraday's law of induction. A voltage is generated in a conductor when it moves through a magnetic field.

G12000

Figure 4 Electromagnetic flowmeter schematic

Pos.	Description
①	Magnet coil
②	Meter tube in electrode plane
③	Signal electrode

Table 8 Legend

$U_1 \sim B \times D \times v$	$qv = \frac{D^2 \times \pi}{4} \times v$	$U_1 \sim qv$
U_1 – Signal voltage	v – Average flow velocity	
B – Magnetic induction	qv – Volume flow	
D – Electrode spacing		

This principle is applied to a conductive fluid in the meter tube through which a magnetic field is generated perpendicular to the flow direction (see Figure 4). The voltage induced in the fluid is measured by two electrodes located diametrically opposite each other. This signal voltage is proportional to the magnetic induction, the electrode spacing and the average flow velocity. Considering that the magnetic induction and the electrode spacing are constant values, a proportionality exists between the signal voltage U_1 and the average flow velocity. From the equation for calculating the volume flowrate, it follows that the signal voltage is linearly proportional to the volume flowrate.

The induced voltage is converted by the transmitter to standardized, analog and digital signals.

Permitted pipe vibration

In accordance with EN 60068-2-6.

Applicable to sensors in remote mount design and sensors in integral mount design.

- Maximum deflection: 0.15 mm (0.006 inch) in the 10 ... 58 Hz range
- Maximum acceleration: 2 g, in the 58 ... 150 Hz range

IP rating

- IP 65 / IP 67 in accordance with EN 60529
- IP 68 in accordance with EN 60529 (for remote mount design only)
- NEMA 4X

Signal cables

For remote mount design only.

The maximum signal cable length between flowmeter sensor and transmitter is 200 m (656 ft).

A 5 m (16.4 ft) cable is included in the scope of delivery.

If more than 5 m (16.4 ft) is required, the cable can be ordered separately – see chapter Accessories, page 82.

For marine applications, a certified signal cable is available.

... Flowmeter sensor

Temperature data

Storage temperature range

–40 ... 70 °C (–40 ... 158 °F)

The temperature range offered depends on a number of different factors.

These factors include the measuring medium temperature

T_{medium} , the ambient temperature T_{amb} , the operating pressure P_{medium} , the liner material and the approvals for the explosion protection.

Maximum permissible cleaning temperature

CIP medium	Liner material	Cleaning temperature
Steam	PTFE, PFA	150 °C (302 °F)
Cleaning fluid	PTFE, PFA	140 °C (284 °F)

- The specified cleaning temperature applies for a maximum ambient temperature of 25 °C (77 °F).
If the ambient temperature is > 25 °C (> 77 °F), the difference to the actual ambient temperature must be subtracted from the maximum cleaning temperature.
- The specified cleaning temperature may be applied for a maximum of 60 minutes.

Ambient temperature as a function of measuring medium temperature

Integral mount design

Note

When using the device in potentially explosive atmospheres, note the additional temperature data in the chapter entitled Operation in Zone 1,21 / Div 1, page 58 and chapter Operation in Zone 2,22 / Div 2, page 64.

Standard flowmeter sensor design

Process connections

For an overview of the available process connection variants, see the chapter entitled "Overview – models without hazardous area approval" on page 8.

Installation length

The flange devices comply with the installation lengths specified in ISO 13359.

For further details, refer to chapter "Dimensions" on page 30.

Materials

Wetted parts

Part	Standard	Option
Liner material	PTFE, PFA, ETFE, hard rubber, soft rubber	Ceramic Carbide, Linatex

Measurement and grounding electrode for liner material

• Hard rubber	SST 1.4571 (AISI 316Ti)	Hastelloy B-3 (2.4600), Hastelloy C-4 (2.4610), titanium, Tantalum, Platinum-iridium, SST 1.4539 (AISI 904L)
• Soft rubber		
• PTFE, PFA, ETFE	SST 1.4539 (AISI 904L)	SST 1.4571 (AISI 316Ti), Hastelloy B-3 (2.4600), Hastelloy C-4 (2.4610), Titanium, Tantalum, Platinum-iridium

Grounding ring	Stainless steel	On request
-----------------------	-----------------	------------

Protection plate	Stainless steel	On request
-------------------------	-----------------	------------

Non-wetted parts (process connection), Design level 'A'

DN	Standard	Option
DN 3 ... 15 (1/10 ... 1/2")	Stainless steel ¹⁾	–
DN 20 ... 400 (3/4 ... 16")	Steel (galvanized) ²⁾	Stainless steel ¹⁾
DN 450 ... 2000 (18 ... 80")	Steel (painted) ²⁾	–

The process connections are made of one of the materials listed below:

1) 1.4301 (AISI 304), 1.4307, 1.4404 (AISI 316L) 1.4435 (AISI 316L),
1.4541 (AISI 321) 1.4571 (AISI 316Ti)

2) 1.0038, 1.0460, 1.0570, 1.0432, ASTM A105, Q255A, 20#, 16Mn

... Flowmeter sensor

Sensor housing, Design level 'A'

Part / DN	Material
Housing	
DN 3 ... 400 (1/10 ... 16")	Cast aluminum (painted) Paint coat: $\geq 80 \mu\text{m}$ thick, RAL 9002
DN 450 ... 2000 (18 ... 80")	Welded steel design (painted) Paint coat: $\geq 80 \mu\text{m}$ thick, RAL 9002
Meter tube	Stainless steel ⁴⁾
Terminal box	Aluminum alloy, painted, $\geq 80 \mu\text{m}$ thick, light gray, RAL 9002 Option: Plastic, gray white, RAL 9002 Option: Stainless Steel
Cable gland⁵⁾	Polyamide, stainless Steel ⁶⁾

The meter tube is made of one of the materials listed below:

4) 1.4301, 1.4307, 1.4404, 1.4435, 1.4541, 1.4571

ASTM materials:

Grade TP304, TP304L, TP316L, TP321, TP316Ti, TP317L, 0Cr18Ni9, 00Cr18Ni10, 0Cr17Ni14Mo2, 0Cr27Ni12Mo3, 0Cr18Ni10Ti

5) Cable gland with M 20 x 1.5 or NPT thread, to be selected via the order number.

6) In the case of explosion-proof design or for ambient temperature of 40 °C (40 °F).

Material loads for process connections

The limits for the permissible measuring medium temperature (T_{medium}) and permissible pressure (P_{medium}) are calculated on the basis of the lining and flange material used in the device (refer to the name plate on the device).

Minimum permissible operating pressure

The following tables show the minimum permissible operating pressure (P_{medium}) depending on measuring medium temperature (T_{medium}) and the liner material.

Design level 'A'

Liner material	Nominal diameter	P_{medium} [mbar abs]	T_{medium} ¹⁾
Hard rubber	DN 25 ... 2000 (1 ... 80")	0	< 85 °C (185 °F)
			< 80 °C (176 °F) ²⁾
Soft rubber	DN 50 ... 2000 (2 ... 80")	0	< 60 °C (140 °F)
PTFE	DN 10 ... 600 (3/8 ... 24")	270	< 20 °C (68 °F)
		400	< 100 °C (212 °F)
		500	< 130 °C (266 °F)
Thick PTFE	DN 25 ... 80 (1 ... 3")	0	< 180 °C (356 °F)
	DN 100 ... 250 (4 ... 10")	67	< 180 °C (356 °F)
	DN 300 (12")	27	< 180 °C (356 °F)
PFA	DN 3 ... 200 (1/10 ... 8")	0	< 180 °C (356 °F)
ETFE	DN 25 ... 600 (1 ... 24")	100	< 130 °C (266 °F)
Ceramic Carbide	DN 25 ... 1000 (1 ... 40")	0	< 80 °C (176 °F)
Linatex ²⁾	DN 50 ... 600 (6 ... 24")	0	< 70 °C (158 °F)

1) For CIP/SIP cleaning, higher temperatures are permitted for limited time periods; refer to the chapter "Maximum permissible cleaning temperature" on page 16.

2) For China production site only.

Installation conditions

General information

The following points must be observed during installation:

- The flow direction must correspond to the marking, if present.
- The maximum torque for all flange screws must be complied with.
- Secure the flange screws and nuts against pipe vibration.
- The devices must be installed without mechanical tension (torsion, bending).
- Install flange devices / wafer-type devices with plane parallel counterflanges and use appropriate gaskets only.
- Only gaskets made from a material that is compatible with the measuring medium and measuring medium temperature may be used.
- Gaskets must not extend into the flow area, since possible turbulence could influence the accuracy of the device.
- The piping may not exert any inadmissible forces or torques on the device.
- Make sure temperature limits are not exceeded operating the device.
- Vacuum shocks in the piping should be avoided to prevent damage to the liners (PTFE). Vacuum shocks can destroy the device.
- Do not remove the sealing plugs in the cable glands until you are ready to install the electrical cable.
- Make sure the gaskets for the housing cover are seated correctly. Carefully gasket the cover. Tighten the cover fittings.
- The transmitter with a remote mount design must be installed at a largely vibration-free location.
- Do not expose the transmitter and sensor to direct sunlight. Provide appropriate sun protection as necessary.
- When installing the transmitter in a control cabinet, make sure adequate cooling is provided.

Devices with extended diagnostic functions

For devices with extended diagnostic functions different installation conditions may be valid.

For further information refer to **Standard functionality** on page 5.

... Flowmeter sensor

Brackets and supports

NOTICE – Potential damage to device!

Improper support for the device may result in deformed housing and damage to internal magnet coils.

Place the supports at the edge of the flowmeter sensor housing (see arrows in Figure 16).

Figure 16 Support for meter sizes larger than DN 400

Devices with meter sizes larger than DN 400 must be mounted with support on a sufficiently strong foundation.

Gaskets

The following points must be observed when installing gaskets:

- For achieve the best results, ensure the gaskets fit concentrically with the meter tube
- To ensure that the flow profile is not distorted, the gaskets must not protrude into the piping.
- The use of graphite with the flange or process connection gaskets is prohibited, because an electrically conductive coating may form on the inside of the meter tube.
- For Non RTJ flange type sensors used in high pressure installations (PN63, CL600 and up), ensure using an appropriate gasket.

Devices with a hard rubber, soft rubber liner

- Devices with a hard / soft rubber liner always require additional gaskets.
- ABB recommends using gaskets made from rubber or rubber-like sealing materials.
- When selecting the gaskets, ensure that the tightening torques specified in chapter are not exceeded.

Devices with a PTFE, PFA or ETFE liner

- Devices with a PTFE, PFA or ETFE liner do not require additional gaskets.

Flow direction

Figure 17 Flow direction

The device measures the flowrate in both directions. Forward flow is the factory setting, as shown in Figure 17.

Elektrode axis

Figure 18 Orientation of the electrode axis

The electrode axis ① should be horizontal if at all possible or no more than 45° from horizontal.

Mounting position

Figure 19 Mounting position

- (A) Vertical installation for measuring abrasive fluids, preferably with flow in upward direction.
- (B) In case of horizontal installation, the Meter tube must always be completely full. Provide for a slight incline of the connection for degassing.

Minimum distance

Figure 20 Minimum distance

Distance D: $\geq 1.0\text{ m}$ (3.3 ft) for design level 'A', $\geq 0.7\text{ m}$ (2.3 ft) for design level 'B'

- In order to prevent the devices from interfering with each other, a minimum distance as shown in Figure 20 must be maintained between the devices.
- The flowmeter sensor may not be operated in the vicinity of powerful electromagnetic fields, e.g., motors, pumps, transformers, etc. A minimum spacing of approx. 1 m (3.28 ft) should be maintained.
- For installation on or to steel parts (e.g. steel brackets), a minimum spacing of approx. 100 mm (3.94 inch) should be maintained (based on IEC801-2 and IECTC77B).

Inlet and outlet sections

Figure 21 In- and outlet section, turn-off component

Pos.	Description
①	Double elbow
②	Turn-off device

Table 16: Legend

The metering principle is independent of the flow profile as long as standing eddies do not extend into the metering section, such as may occur after double elbows, in the event of tangential inflow, or where half-open gate valves are located upstream of the flowmeter sensor. In such cases, measures must be put in place to normalize the flow profile.

- (A) Do not install fittings, manifolds, valves, etc., directly in front of the flowmeter sensor.
- (B) Inlet and outlet section: Length of straight inlet and outlet section of the flowmeter sensor. Experience has shown that, in most installations, inlet sections 3 x DN long and outlet sections 2 x DN long are sufficient (DN = nominal diameter of the flowmeter sensor). For test stands, the reference conditions of 10 x DN inlet section and 5 x DN outlet section must be provided, in accordance with EN 29104 / ISO 9104. Valves or other turn-off components should be installed in the outlet section. Butterfly valves must be installed so that the valve plate does not extend into the flowmeter sensor.

... Flowmeter sensor

Free inlet or outlet

Figure 22 Free inlet or outlet

- Ⓐ Do not install the flowmeter at the highest point or in the draining off side of the pipeline, flowmeter runs empty, air bubbles can form.
- Ⓑ Provide for a siphon fluid intake for free inlets or outlets so that the pipeline is always full.

Strongly contaminated measuring media

Figure 23 Bypass connection

For strongly contaminated measuring media, a bypass connection according to the figure is recommended so that operation of the system can continue to run without interruption during the mechanical cleaning.

Sensor insulation

Figure 24 Insulation of the flowmeter sensor

The high temperature design allows for complete thermal insulation of the flowmeter sensor. The pipeline and sensor must be insulated ① after installing the unit according to the illustration.

Grounding

The flowmeter sensor must be connected to ground potential. For technical reasons, this potential should be identical to the potential of the measuring medium. For plastic or insulated lined pipelines, the measuring medium is grounded by installing ground plates. When there are stray potentials present in the pipeline, a ground plate is recommended on both ends of the flowmeter sensor.

Installation in the vicinity of pumps

Figure 25 Vibration damping

Pos.	Description
①	Pump
②	Damping device
③	Shut-off device

Table 17: Legend

Strong vibrations in the pipeline must be damped using flexible damping devices.

The damping devices must be installed beyond the supported flowmeter section and outside of the section between the shut-off devices.

Do not connect flexible damping devices directly to the flowmeter sensor.

Installation in pipelines with larger nominal diameters

Figure 26 Using reduction pieces

Determine the resulting pressure loss when using transition pieces ①:

1. Calculate the diameter ratio d/D .
2. Determine the flow velocity based on the flow rate nomogram (Figure 27).
3. Read the pressure drop on the Y-axis in Figure 27.

Figure 27 Flow rate nomogram for pressure drop calculations for flange transition piece with $\alpha/2 = 8^\circ$

High pressure sensors (PN63, CI600 and up)

With sensors, designed for higher pressure rating, the inner diameter of the sensor might be different from the attached pipe – see dimensions table.

... Flowmeter sensor

Dimensions

Flange DN 3 ... 100 (1/10 ... 4"), aluminum sensor housing (shell housing) – Design level 'A'

All specified dimensions and weights are in mm (inch) or kg (lb). The stated weights are approximate; the maximum weight is always stated.

Integral mount design

Remote mount design

① Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

Figure 28 Integral mount design (top), remote mount design (bottom)

Table 17 Dimensions DN 50 ... 100

Tolerance for L: +0 / -3 mm (+0 / -0,018 in.)

1) Other pressure ratings on request.

2) If a grounding ring is fitted (attached to one side of the flange), dimension L increases as follows: by 3 mm (0.118 inch) for DN 3 ... 100, and by 5 mm (0.197 inch) for DN 125.

3) If protection plates are fitted (attached to both sides of the flange), dimension L increases as follows: by 6 mm (0.236 inch) for DN 3 ... 100, and by 10 mm (0.394 inch) for DN 125.

4) Connection flange DN 10.

5) Connection flange 1/2".

6) Connecting dimensions in accordance with EN 1092-1. For DN 65, PN 16 in accordance with EN 1092-1, please order PN 40.

7) For devices in high-temperature design, dimension F, F1, F2 increases by +127 mm (+5.0 inch).

8) Depending on the device design, the dimensions change according to the following table:

Device design		Dimension F, F1	Dimension F2
Without explosion protection	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)
Explosion protection Zone 1, Div. 1	Standard sensor design	+74 mm (+2.91 inch)	+47 mm (+1.85 inch)
	High-temperature sensor design	+127 mm (+5 inch)	+174 mm (+6.85 inch)
Explosion protection Zone 2, Div. 2	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)

Table 19 Dimensions DN 350 ... 400

Tolerance for L: DN 150 ... 200: +0 / -3 mm (+0 / -0,018 in.), DN 250 ... 400: +0 / -5 mm (+0 / -0,197 in.)

1) Other pressure ratings on request.

2) If a grounding ring is fitted (attached to one side of the flange) dimension L increases by 5 mm (0.197 inch).

3) If protection plates are fitted (attached to both sides of the flange) dimension L increases by 10 mm (0.394 inch).

4) For devices in high-temperature design, dimension F, F1, F2 increases by +127 mm (+5.0 inch).

5) Depending on the device design, the dimensions change according to the following table.

Device design		Dimension F, F1	Dimension F2
Without explosion protection	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)
Explosion protection Zone 1, Div. 1	Standard sensor design	+74 mm (+2.91 inch)	+47 mm (+1.85 inch)
	High-temperature sensor design	+127 mm (+5 inch)	+174 mm (+6.85 inch)
Explosion protection Zone 2, Div. 2	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)

Table 22 Dimensions DN 700 ... 2000

Tolerance for L: DN 700 ... 2000 +0 / -10 mm (+0 / -0.394 in.)

1) Other pressure ratings on request.

2) If a grounding ring is fitted (attached to one side of the flange) dimension L increases by 5 mm (0.197 in.).

3) If protection plates are fitted (attached to both sides of the flange) dimension L increases by 10 mm (0.394 in.).

4) For devices in high-temperature design, dimension F, F1, F2 increases by +127 mm (+5.0 in.).

5) Depending on the device design, the dimensions change according to the following table.

Device design		Dimension F, F1	Dimension F2
Without explosion protection	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)
Explosion protection Zone 1, Div. 1	Standard sensor design	+74 mm (+2.91 inch)	+47 mm (+1.85 inch)
	High-temperature sensor design	+127 mm (+5 inch)	+174 mm (+6.85 inch)
Explosion protection Zone 2, Div. 2	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)

Table 25 Dimensions DN 200 (8") ... 400 (16")

Tolerance L: DN 25 ... 100 +0 / -5 mm (+0 / -0,197 inch), DN 150 ... 200 +0 / -5 mm (+0 / -0,197 inch),
DN 250 ... 400 +0 / -8 mm (+0 / -0,314 inch)

Tolerance Di: ETFE Liner: +1/ -5 mm (+1/ - 0,197 inch) Hardrubber: +1/ -3 mm (+1/ -0.118 inch)

All pressure ratings (PN63, PN100, CL600 ... CL2500 available with Hardrubber and ETFE only)

1) If a grounding plate is installed (attached to one side of the flange), this increases dimension L as follows: DN 3 ... 100 by 3 mm (0.118 inch; DN 125 by 5 mm (0.197 inch).

2) If protection plates are installed (attached to both sides of the flange), this increases dimension L as follows: DN 3 ... 100 by 6 mm (0.236 inch; DN 125 by 10 mm (0.394 inch).

3) Depending on the device design, the dimensions change according to the following table.

Device design		Dimension F, F1	Dimension F2
Without explosion protection	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)
Explosion protection Zone 1, Div. 1	Standard sensor design	+74 mm (+2.91 inch)	+47 mm (+1.85 inch)
	High-temperature sensor design	+127 mm (+5 inch)	+174 mm (+6.85 inch)
Explosion protection Zone 2, Div. 2	Standard sensor design	0	0
	High-temperature sensor design	+127 mm (+5 inch)	+127 mm (+5 inch)

Transmitter

Features

- 4 ... 20 mA current output
- Current output in the event of an alarm can be configured to 21 ... 22.6 mA (NAMUR NE43)
- Measuring range: Can be configured between 0.02 ... $2 \times Q_{max} DN$
- Operating mode for flow measurement can be configured
- Programmable digital output. Can be configured as frequency output, pulse output or binary output.
- Two slots for optional plug-in cards for retrofitting additional current / digital outputs or a digital input.
- Damping: 0.04 ... 100 s configurable (1τ)
- Low flow cut-off: 0 ... 20 % for current and pulse output
- Parameterization by means of HART communication
- Empty pipe detection¹⁾
- Simulation of current and binary output (manual process execution)

1) Requirements for Empty Pipe detector function:
The conductivity of the fluid must be $\geq 20 \mu S/cm$
Nominal diameter must be $\geq DN 10$

LCD indicator (option)

- High-contrast LCD indicator
- Display of the current flow rate as well as the total flow rate
- Application-specific visualizations which the user can select. Two operator pages can be configured to display multiple values in parallel.
- Plain text fault diagnostics
- Menu-guided parameterization with four buttons
- 'Easy Set-up' function for fast commissioning
- Parameterization of the device through the front glass with the housing closed

Isolation of outputs

The digital output terminals 41 / 42 and 51 / 52 have a common ground.

The current output and the digital outputs are electrically isolated from each other.

Optional plug-in cards

The transmitter has two slots (OC1, OC2) in which plug-in cards can be inserted to provide additional inputs and outputs. The slots are located on the transmitter motherboard and can be accessed after removing the front housing cover.

Plug-in card	Description
	Current output, 4 to 20 mA passive (red) Order no.: 3KQZ400029U0100
	Passive digital output (green) Order no.: 3KQZ400030U0100
	Passive digital input (yellow) Order no.: 3KQZ400032U0100
	Loop power supply 24 V DC (blue) Order no.: 3KQZ400031U0100
	Modbus RTU RS485 (white) Order no.: 3KQZ400028U0100
	PROFIBUS DP (white) Order no.: 3KQZ400027U0100

IP rating

In accordance with EN60529: IP 65 / IP 67, NEMA 4X

Vibration

In accordance with EN 60068-2

- In the 10 ... 58 Hz range, max. deflection 0.15 mm (0.006 inch)¹⁾
- In the range of 58 ... 150 Hz, max. acceleration 2 g¹⁾

1) Peak load

Temperature data

	Standard	Optional
Ambient temperature	−20 ... 60 °C (−4 ... 140 °F)	−40 ... 70 °C (−40 ... 158 °F)
Storage temperature	−40 ... 70 °C (−40 ... 158 °F)	

NOTICE

When operating below −20°C (−4 °F), the LCD display can no longer be read. Full functionality is assured at temperatures above −20°C (−4 °F).

Housing design

Integral mount design	
Housing	Cast aluminum, painted
Paint	≥ 80 µm thick, RAL 9002 (gray white)
Cable gland ¹⁾	Polyamide Stainless steel ²⁾
Remote mount design	
Housing	Cast aluminum, painted
Paint	≥ 80 µm thick, RAL 9002 (gray white)
Cable gland ¹⁾	Polyamide Stainless steel ²⁾
Weight	4.5 kg (9.92 lb)

1) Cable gland with M 20 x 1.5 or NPT thread, to be selected via the order number.
2) On explosion-proof design for ambient temperature of −40 °C (−40 °F).

Transmitter

Dimensions

Figure 34 Mounting dimensions of double-compartment housing

Pos.	Description
①	Hole pattern for mounting holes
②	Female thread (either 1/2" NPT or M20 x 1,5) refer to model coding. With 1/2" NPT there will be a plug instead of the PG cable inlet.

Electrical data for inputs and outputs

Power supply

AC power supply	
Terminals	L / N
Operating voltage	100 ... 240 V AC (-15 % / +10 %), 47 ... 64 Hz
Power consumption	$S_{\max}$: < 20 VA
Power-up current	18.4 A, $t < 3$ ms

DC voltage supply

Terminals	1+ / 2-
Operating voltage	16.8 ... 30 V DC
Ripple	< 5 %
Power consumption	$P_{\max}$: < 20 W
Power-up current	21 A, $t < 10$ ms

HART communication

A HART DTM in accordance with FDT1.2 standards is available. HART protocol based Integrations in other Tools or systems (e.g., Emerson AMS/Siemens PCS7) are available on request. The DTM, the DD and EDD is available for download from www.abb.com/flow.

HART output

Terminals	Active: Uco / 32 Passive: 31 / 32
Protocol	HART 7.1
Transmission	FSK modulation on current output 4 ... 20 mA in accordance with Bell 202 standard
Baud rate	1200 baud
Signal amplitude	Maximum 1.2 mAss
Current output load	Minimum 250 Ω
Cable	0,25 mm ² (AWG 24), twisted
Maximum cable length	1200 m (3937 ft)

For information on communication via the HART protocol, refer to HART® communication in Operating Instruction [OI/FEP630/FEH630-EN](#).

Current output U_{co} / 32, 31 / 32

Can be configured for outputting mass flow and volume flow via the on-site software.

(A) Active current output U_{co} / 32, active

(B) Passive current output 31 / 32, passive

Figure 37 (I = internal, E = external, RB = load, Uq = Source voltage)

Permissible source voltage U_q for passive outputs in relation to load resistance R_B where $I_{\max} = 22$ mA. ■ = Permissible range

Figure 38 Source voltage for passive outputs

	Active	Passive
Terminals	Uco / 32	31 / 32
Output signal	4 ... 20 mA or 4 ... 12 ... 20 mA, switchable	4 ... 20 mA
Load R_B	$250 \Omega \leq R_B \leq 300 \Omega$	$250 \Omega \leq R_B \leq 600 \Omega$
Source voltage U_q ¹⁾	•	$13 \text{ V} \leq U_q \leq 30 \text{ V}$
Measuring error	< 0.1 % of measured value	
Resolution	0.4 μA per digit	
Isolation	The current output and the digital outputs are electrically isolated from each other.	

Table 29 Electrical data current output U_{co} / 32, 31 / 32

1) The source voltage U_q depends on the load R_B and must be within the permissible range.

Digital output 41 / 42, 51 / 52

Can be configured as pulse, frequency or binary output via onsite software.

- (A) Passive digital output 41 / 42, 51 / 52 as pulse or frequency output
 (B) Passive digital output 51 / 52 as binary output

Figure 39 (I = internal, E = external, R_B = load)

Pulse / frequency output (passive)	
Terminals	41 / 42, 51 / 52
Output 'closed'	$0 \text{ V} \leq U_{\text{CEL}} \leq 3 \text{ V}$ For $f < 2.5 \text{ kHz}$: $2 \text{ mA} < I_{\text{CEL}} < 30 \text{ mA}$ For $f > 2.5 \text{ kHz}$: $10 \text{ mA} < I_{\text{CEL}} < 30 \text{ mA}$
Output 'open'	$16 \text{ V} \leq U_{\text{CEH}} \leq 30 \text{ V DC}$ $0 \text{ mA} \leq I_{\text{CEH}} \leq 0.2 \text{ mA}$
f_{max}	10.5 kHz
Pulse width	0.1 ... 2000 ms
Binary output (passive)	
Terminals	41 / 42, 51 / 52
Output 'closed'	$0 \text{ V} \leq U_{\text{CEL}} \leq 3 \text{ V}$ $2 \text{ mA} \leq I_{\text{CEL}} \leq 30 \text{ mA}$
Output 'open'	$16 \text{ V} \leq U_{\text{CEH}} \leq 30 \text{ V DC}$ $0 \text{ mA} \leq I_{\text{CEH}} \leq 0.2 \text{ mA}$
Switching function	Parameterization possible See Menu: Input/Output in Operating Instruction OI/FEP630/FEH630-EN

Table 30 Electrical data digital output 41 / 42, 51 / 52

NOTICE

- The Terminals 42 / 52 have a common ground. Digital outputs DO 41 / 42 and DO 51 / 52 are not electrically isolated from each other. If an additional electrically isolated digital output is required, a corresponding plug-in module must be used.
- If you are using a mechanical counter, we recommend setting a pulse width of $\geq 30 \text{ ms}$ and a maximum frequency of $f_{\text{max}} \leq 3 \text{ kHz}$.

Current output V1 / V2, V3 / V4 (plug-in card)

Up to **two additional** current outputs can be implemented via the 'Passive current output (red)' plug-in card.

- (A) Passive current output V1 / V2, passive
 (B) Passive current output V3 / V4, passive

Figure 40 (I = internal, E = external, R_B = load)

The plug-in card can be used in slot OC1 or in OC2.

Permissible source voltage U_q for passive outputs in relation to load resistance R_B where $I_{\text{max}} = 22 \text{ mA}$. ■ = Permissible range

Source voltage U_q *	$13 \text{ V} \leq U_q \leq 30 \text{ V}$
Measuring error	$< 0.1 \%$ of measured value
Resolution	0.4 μA per digit

Table 31 Electrical data current output V1 / V2, V3 / V4

1) The source voltage U_q is dependent of the load R_B and must be placed in an additional area.

... Electrical connections

Digital output V1 / V2, V3 / V4 (plug-in card)

The 'digital output passive (green)' plug-in card can be used to create one additional binary output.

Figure 42 Plug-in card as binary output (I = internal, E = external, R_B = load)

The plug-in module can be used in slot OC1 or OC2.

Binary output (passive)

Terminals	V1 / V2, V3 / V4
Output 'closed'	$0 \text{ V} \leq U_{\text{CEL}} \leq 3 \text{ V}$ $2 \text{ mA} < I_{\text{CEL}} < 30 \text{ mA}$
Output 'open'	$16 \text{ V} \leq U_{\text{CEH}} \leq 30 \text{ V DC}$ $0 \text{ mA} \leq I_{\text{CEH}} \leq 0.2 \text{ mA}$
Switching function	Parameterization possible See Menu: Input/Output in Operating Instruction OI/FEP630/FEH630-EN

Table 32 Electrical data digital output V1 / V2, V3 / V4

Digital input V1 / V2, V3 / V4 (plug-in card)

A digital input can be implemented via the 'Passive digital input (yellow)' plug-in module.

The plug-in module can be used in slot OC1 or OC2.

Figure 43 Plug-in card as digital input (I = internal, E = external)

Digital input

Terminals	V1 / V2, V3 / V4
Input 'On'	$16 \text{ V} \leq U_{\text{KL}} \leq 30 \text{ V}$
Input 'Off'	$0 \text{ V} \leq U_{\text{KL}} \leq 3 \text{ V}$
Internal resistance R_i	$6.5 \text{ k}\Omega$
Function	Parameterization possible See Menu: Input/Output in Operating Instruction OI/FEP630/FEH630-EN

Table 33 Electrical data digital input V1 / V2, V3 / V4

24 V DC power supply V1 / V2 (plug-in module)

Use of the 'loop power supply (blue)' plug-in card allows a passive output on the transmitter to be used as an active output. See chapter "Connection examples" on page 53.

Figure 44 (I = Internal, E = External)

The plug-in module can only be used in slot OC1

Loop power supply 24 V DC

Terminals	V1 / V2
Function	For active connection of passive outputs
Output voltage	24 V DC at 0 mA, 17 V DC at 25 mA
Load rating I_{max}	25 mA, permanently short circuit-proof

Table 34 Electrical data plug-in card 24 V DC power supply V1 / V2

NOTICE

When using the device in potentially explosive atmospheres, the power supply plug-in card must only be used to power one passive output. It must not be connected to multiple passive outputs.

Modbus / PROFIBUS DP interface V1 / V2 (plug-in card)

A Modbus or PROFIBUS DP interface can be implemented by using the 'Modbus RTU, RS485 (white)' or 'PROFIBUS DP, RS485 (white)' plug-in cards.

Figure 45 Plug-in card as a Modbus / PROFIBUS DP interface (I = internal, E = external)

The corresponding plug-in card can only be used in slot OC1.

For information on communication through the Modbus or PROFIBUS DP protocols, refer to chapters **Modbus®** communication and **PROFIBUS DP®** communication in Operating Instruction [OI/FEP630/FEH630-EN](#).

Connection examples

Input and output functions are configured via the device software in accordance with the desired application. See **Parameter descriptions** in Operating Instruction [OI/FEP630/FEH630-EN](#).

Active digital output 41 / 42, 51 / 52, V3 / V4

When the 'loop power supply 24 V DC (blue)' plug-in card is used, the digital outputs on the basic device and on the plug-in cards can also be wired as active digital outputs.

NOTICE

Each 'loop power supply (blue)' plug-in card must only power one output.

It must not be connected to two outputs (e.g. digital output 41 / 42 and 51 / 52).

- Ⓐ 'Loop power supply (blue)' plug-in card in slot 1
Ⓑ Digital output, digital output 41 / 42

Figure 46 Active digital output 41 / 42 (example)

The connection example shows usage for digital output 41 / 42; the same applies to usage for digital output 51 / 52.

- Ⓐ 'Loop power supply (blue)' plug-in card in slot 1
Ⓑ 'Digital output (green)' plug-in card in slot 2

Ex. 1 Input 1

Figure 48 Digital output 41 / 42, 51 / 52 passive connected to a Process Control System (Example)

The R_x resistors limit the maximum current through the optoelectronic coupler of the digital outputs in the transmitter. The maximum permissible current is 25 mA. An R_x value of 1000 Ω / 1 W is recommended at a voltage level of 24 V DC. The input on the distributed control system is reduced from 24 V DC to 0 V DC (falling edge) with '1' at the digital output.

... Electrical connections

Active current output V3 / V4

When the 'loop power supply 24 V DC, blue' plug-in card is used, the current output on the plug-in card can also be wired as the active current output.

- Ⓑ Plug-in card 'Passive digital input (yellow)' in slot 2

Figure 50 Active digital output V3 / V4 (example)

Connection versions digital output 41 / 42, 51 / 52

Depending on the wiring of digital outputs DO 41 / 42 and 51 / 52, they can be used parallel or only individually. The electrical isolation between the digital outputs also depends on the wiring.

Figure 51 Connection versions digital output 41 / 42 and 51 / 52

	DO 41 / 42 and 51 / 52 can be used parallel	DO 41 / 42 and 51 / 52 electrically isolated
Ⓐ	Yes	No
Ⓑ	Yes	Yes
Ⓒ	No, only DO 41 / 42 can be used	No
Ⓓ	No, only DO 51 / 52 can be used	No

Table 35 Connection versions digital output

Digital communication

HART communication

Note

The HART® protocol is not secure, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

In connection with the DTM (Device Type Manager) available to the device, communication (configuration, parameterization) can be carried out FDT 0.98 or 1.2 (DSV401 R2).

Other tool or system integrations (e.g. Emerson AMS / Siemens PCS7) on request.

The necessary DTMs and other files can be downloaded from www.abb.com/flow.

HART output

Terminals	Active: Uco / 32 Passive: 31 / 32
Protocol	HART 7.1
Transmission	FSK modulation on current output 4 to 20 mA in accordance with the Bell 202 standard
Baud rate	1200 baud
Signal amplitude	Maximum 1.2 mA

Factory setting of the HART process variables

HART process variable	Process value
Primary Value (PV)	Q_m – Mass flow
Secondary Value (SV)	Q_v – Volume flow rate
Tertiary Value (TV)	p – Density
Quaternary Value (QV)	T_m – Measuring medium temperature

The process values of the HART variables can be set in the device menu.

Modbus communication

Note

The Modbus® protocol is not secure, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

Modbus is an open standard owned and administrated by an independent group of device manufacturers styled the Modbus Organization (www.modbus.org).

Using the Modbus protocol allows devices made by different manufacturers to exchange information via the same communication bus, without the need for any special interface devices to be used.

Modbus protocol

Terminals	V1 / V2
Configuration	Via the Modbus interface or via the local operating interface in connection with Asset Vision Basic (DAT200) and a corresponding Device Type Manager (DTM)
Transmission	Modbus RTU - RS485 serial connection
Baud rate	2400, 4800, 9600, 19200, 38400, 56000, 57600, 115200 baud Factory setting: 9600 baud
Parity	None, even, odd Factory setting: odd
Stop bit	One, two Factory setting: One
IEEE format	Little endian, big endian Factory setting: Little endian
Typical response time	< 100 ms
Response delay time	0 to 200 milliseconds Factory setting: 10 milliseconds

... Electrical connections

...Digital communication

...Modbus communication

Figure 52 Communication with the Modbus protocol

Cable specification

The maximum permissible length is dependent on the baud rate, the cable (diameter, capacity and surge impedance), the number of loads in the device chain, and the network configuration (2 core or 4-core).

- At a baud rate of 9600 and with a conductor cross-section of at least 0.14 mm² (AWG 26), the maximum length is 1000 m (3280 ft).
- When using a 4-core cable as a 2-wire wiring system, the maximum length must be halved.
- The spur lines must be short, a maximum of 20 m (66 ft).
- When using a distributor with 'n' connections, each branch must have a maximum length of 40 m (131 ft) divided by 'n.'

The maximum cable length depends on the type of cable used. The following standard values apply:

- Up to 6 m (20 ft): cable with standard shielding or twisted-pair cable.
- Up to 300 m (984 ft): double twisted-pair cable with overall foil shielding and integrated earth cable.
- Up to 1200 m (3937 ft): double twisted-pair cable with individual foil shielding and integrated earth cables.
Example: Belden 9729 or equivalent cable.

A category 5 cable can be used for Modbus RS485 up to a maximum length of 600 m (1968 ft). For the symmetrical pairs in RS485 systems, a surge impedance of more than 100 Ω is preferred, especially at a baud rate of 19200 and above.

PROFIBUS DP communication

Note

The PROFIBUS DP protocol are not secure, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

PROFIBUS DP interface

Terminals	V1 / V2
Configuration	Via the PROFIBUS DP interface or via the local operating interface in connection with Asset Vision Basic (DAT200) and a corresponding Device Type Manager (DTM)
Transmission	In accordance with IEC 61158-2
Baud rate	9.6 kbps, 19.2 kbps, 45.45 kbps, 93.75 kbps, 187.5 kbps, 500 kbps, 1.5 Mbps
	The baud rate is automatically detected and does not need to be configured manually
Device profile	PA Profile 3.02
Bus address	Address range 0 to 126 Factory setting: 126

For commissioning purposes, you will need a device driver in EDD (Electronic Device Description) or DTM (Device Type Manager) format plus a GSD file.

You can download EDD, DTM and GSD from:

www.abb.com/flow.

The files required for operation can also be downloaded from www.profibus.com.

ABB provides three different GSD files which can be integrated in the system.

ID number	GSD file name	
0x9740	PA139740.gsd	1xAI, 1xTOT
0x9700	PA139700.gsd	1AI
0x3432	ABB_3432.gsd	6xAI, 2xTOT, 1xAO, 1xDI, 1xDO

Users decide at system integration whether to install the full range of functions or only part. Switching is made using the 'Ident Nr. Selector' parameter.

See also **Ident Nr. Selector** in Operating Instruction OI/FEP630/FEH630-EN.

Limits and rules when using ABB Fieldbus accessories

Figure 53 Bus cable length depends on the transmission rate

Pro PROFIBUS Line

(Line = Starts at DP Master and goes to last DP/PA Slave)

- Approximately 4 to 8 DP segments through the repeater (see repeater data sheets)
- Recommended DP transfer rate 500 to 1500 kBit/s
- The slowest DP node determines the transfer rate of the DP line
- Number of PROFIBUS DP and PA nodes ≤ 126 (addresses 0 to 125)

Per PROFIBUS DP segment

- Number of DP nodes ≤ 32
(Node = Devices with / without PROFIBUS address)
- Bus termination required at the beginning and end of each DP segment!
- Trunk cable length (L_T) see diagram
(length dependent on transfer rate)
- Cable length of at least 1 m between two DP nodes at ≥ 1500 kBit/s
- Spur cable length (L_S), at ≤ 1500 kBit/s: $L_S \leq 0.25$ m, at > 1500 kBit/s: $L_S = 0.00$ m!
- At 1500 kBit/s and ABB DP cable type A:
 - Sum of all spur cable lengths (L_S) ≤ 6.60 m, trunk cable length (L_T) > 6.60 m, total length = $L_T + (\sum L_S) \leq 200$ m, maximum 22 DP nodes (= $6.60 \text{ m} / (0.25 \text{ m} + 0.05 \text{ m spare})$)

Operation in Zone 1, 21 / Div 1

Electrical connections

Ⓐ Transmitter

Ⓑ Sensor

Figure 54 Electrical connections

Note

For detailed information on grounding the transmitter and the sensor, please refer to the operating or commissioning instruction.

Connections for inputs and outputs

Terminal	Function / comments
Uco / 32	Current output 4 to 20 mA- / HART output, active or
31 / 32	Current output 4 to 20 mA- / HART output, passive
41 / 42	Passive digital output DO1
51 / 52	Passive digital output DO2
V1 / V2	Plug-in card, slot OC1
V3 / V4	Plug-in card, slot OC2

Plug-in cards may not be retrofitted in devices with explosion protection on-site – loss of Ex Approval.

Optional plug-in cards

See page 58.

Configuring the current output

Current output terminals 31 / 32 / Uco can be operated on-site in active or passive mode through appropriate switching.

Terminal Uco / 32	Current output 4 to 20 mA- / HART output, active
Terminal 31 / 32	Current output 4 to 20 mA- / HART output, passive

Configuring the digital outputs

In the case of the device version suited for operation in Ex Zone 1 (dual-compartment housing), digital outputs DO1 (41 / 42) and DO2 (51 / 52) can be configured for connection to a NAMUR switching amplifier.

On leaving the factory, the device is configured with the standard wiring (non-NAMUR).

Connecting the signal cable

Only for remote mount design. The sensor housing and transmitter housing must be connected to potential equalization.

Terminal	Function / comments
U_{FE}	Sensor power supply
GND	Ground
A	Data line
B	Data line
	Functional earth / Shielding

The output circuits are designed so that they can be connected to both intrinsically-safe and non-intrinsically-safe circuits.

- Combining intrinsically safe and non-intrinsically safe circuits is not permitted.
- On intrinsically safe circuits, potential equalization should be established along the entire length of the cable used for the signal outputs.
- The rated voltage of the non-intrinsically safe circuits is $U_M = 30 \text{ V}$.
- Intrinsic safety is preserved if the rated voltage $U_M = 30 \text{ V}$ is not up-scaled when connections are established to non-intrinsically safe external circuits.

Electric data for operation in Zone 1, 21 / Div 1

Devices with HART protocol

When operating in potentially explosive areas, observe the following electrical data for the signal inputs and outputs of the transmitter.

Current output terminals 31 / 32 / U_{CO} can be operated on-site in active or passive mode through appropriate switching.

Model: FEP631, FEH631 or FET632	Type of protection													
Outputs on basic device	'e' / 'XP'		'ia' / 'IS'											
	U_M [V]	I_M [A]	U_O	U_I [V]	I_O [mA]	I_I [mA]	P_O [mW]	P_I [mW]	C_O [nF]	C_I [nF]	C_{OPA} [nF]	C_{IPA} [nF]	L_O [mH]	L_I [mH]

Electrical connections, devices in Zone 2, 22 / Div 2

Electrical connections

Ⓐ Transmitter

Figure 55 Electrical connections

Note

For detailed information on grounding the transmitter and the sensor, please refer to the operating or commissioning instruction.

Connections for the power supply

AC power supply	
Terminal	Function / comments
L	Phase
N	Neutral conductor
PE / ⊕	Protective earth (PE)
PA	Potential equalization

DC voltage supply

Terminal	Function / comments
1+	+
2-	-
PE / ⊕	Protective earth (PE)
PA	Potential equalization

Connections for inputs and outputs

Terminal	Function / comments
Uco / 32	Current output 4 to 20 mA- / HART output, active or
31 / 32	Current output 4 to 20 mA- / HART output, passive
41 / 42	Passive digital output DO1
51 / 52	Passive digital output DO2
V1 / V2	Plug-in card, slot OC1
V3 / V4	Plug-in card, slot OC2

Plug-in cards may not be retrofitted in devices with explosion protection on-site – loss of Ex Approval.

Ⓑ Sensor

Connecting the signal cable

Only for remote mount design. The sensor housing and transmitter housing must be connected to potential equalization.

Terminal	Function / comments
U _{FE}	Sensor power supply
GND	Ground
A	Data line
B	Data line
⊕	Functional earth / Shielding

Special connection conditions

Note

The AS plug-in card (24 V DC loop power supply) may only be used to power the internal inputs and outputs on the device. It must not be used to power external circuits!

Note

If the protective earth (PE) is connected in the flowmeter's terminal box, you must ensure that no dangerous potential difference can arise between the protective earth (PE) and the potential equalization (PA) in areas with explosion risk.

Note

For devices with a power supply of 16 to 30 V DC, on-site external overvoltage protection must be provided. It must be ensured that the overvoltage is limited to 140 % (=42 V DC) of the maximum operating voltage.

Operation in Zone 2, 22 / Div 2

Electric data for operation in Zone 2, 22 / Div 2

Devices with HART protocol

When operating in potentially explosive areas, observe the following electrical data for the signal inputs and outputs of the transmitter.

Current output terminals 31 / 32 / Uco can be operated on-site in active or passive mode through appropriate switching.

Model: FEP631, FEH631 or FET632				
Outputs on basic device	Operating values (general)		Type of protection – 'nA' / 'NI'	
	U _N	I _N	U _N	I _N
Current / HART output 31 / UCO, active Terminals 31 / UCO	30 V	30 mA	30 V	30 mA
Current / HART output 31 / 32, passive Terminals 31 / 32	30 V	30 mA	30 V	30 mA
Digital output 41 / 42, active* Terminals 41 / 42 and V1 / V2*	30 V	30 mA	30 V	30 mA
Digital output 41 / 42, passive Terminals 41 / 42	30 V	25 mA	30 V	25 mA
Digital output 51 / 52, active* Terminals 51 / 52 and V1 / V2*	30 V	30 mA	30 V	30 mA
Digital output 51 / 52, passive Terminals 51 / 52	30 V	30 mA	30 V	30 mA

All outputs are electrically isolated from each other and from the power supply.

Digital outputs 41 / 42 and 51 / 52 are not electrically isolated from each other. Terminals 42 / 52 have the same potential.

Model: FEP631, FEH631 or FET632				
Plug-in cards	Operating values (general)		Type of protection – 'nA' / 'NI'	
	U _N	I _N	U _N	I _N
Current output V3 / V4, active1) Terminals V3 / V4 and V1 / V21)	30 V	30 mA	30 V	30 mA
Current output V1 / V2, passive2) Current output V3 / V4, passive2) Terminals V1 / V22) or V3 / V42)	30 V	30 mA	30 V	30 mA
Digital output V3 / V4, active1) Terminals V3 / V4 and V1 / V21)	30 V	25 mA	30 V	25 mA
Digital output V1 / V2, passive2) Digital output V3 / V4, passive2) Terminals V1 / V22) or V3 / V42)	30 V	30 mA	30 V	30 mA
Digital input V3 / V4, active1) Terminals V3 / V4 and V1 / V2	30 V	3.45 mA	30 V	3.45 mA
Modbus* / PROFIBUS DP* Terminals V1 / V2	30 V	30 mA	30 V	30 mA

* Only in conjunction with additional '24 V DC loop power supply (blue)' plug-in card in slot OC1.

** The terminal assignment depends on the model number or the slot assignments. For connection examples, refer to **Installation** in the Operating Instruction ([OI/FEP630/FEH630-EN](#)).

Temperature data surface temperature for operation in Zone 2, 22 / Div 2

	HT		80 °C	-	-

* Low-temperature version (option)

** Single-compartment housing

*** Dual-compartment housing

NT standard version, T_{medium} maximum 130 °C (266 °F)

HT high-temperature version, T_{medium} maximum 180 °C (356 °F)

Thermally uninsulated: the sensor is not enclosed with pipe insulation material.

Thermally insulated: the sensor is enclosed with pipe insulation material.

Note

Cables for power supply, signal inputs and outputs must meet the following specifications:

With single-compartment housing:

- At an ambient temperature ≤ 50 °C the cable must be suited for at least 80 °C
- At an ambient temperature ≤ 60 °C the cable must be suited for at least 90 °C

With dual-compartment housing:

- At an ambient temperature of 50 °C the cable must be suited for at least 70 °C
- At an ambient temperature of 60 °C the cable must be suited for at least 80 °C

...Operation in Zone 2, 22 / Div 2

	HT		80 °C	80 °C	20 °C

* Low-temperature version (option)

NT standard version, T_{medium} maximum 130 °C (266 °F)

HT high-temperature version, T_{medium} maximum 180 °C (356 °F)

Thermally uninsulated: the sensor is not enclosed with pipe insulation material.

Thermally insulated: the sensor is enclosed with pipe insulation material.

Note

Cables for power supply, signal inputs and outputs must meet the following specifications:

- At an ambient temperature ≤ 50 °C the cable must be suited for at least 70 °C
- At an ambient temperature ≤ 60 °C the cable must be suited for at least 80 °C

Use in areas exposed to combustible dust

When using the device in areas exposed to combustible dusts (dust ignition), the following points must be observed:

- The maximum surface temperature of the device may not up-scale the following values.

FEP631, FEH631	80 °C (176 °F)
FEP632, FEH632	80 °C (176 °F)
FET632	80 °C (176 °F)
- The process temperature of the attached piping may up-scale 80 °C (176 °F).
- Approved dust-proof cable glands must be used when operating in Zone 21, 22 or in Class II, Class III.
- In potentially explosive atmospheres, the signal cable must measure at least 5 m (16.40 ft).

Notes for ProcessMaster FEP631

- 1) Not available with Single Compartment Housing
- 2) For China production site only.
- 3) Not available with Div1 in conjunction with -40°C
- 4) Not available with Zone 1 / Div 1
- 5) Flange DN 15 ... 600 according to ASME B16.5. Flange > DN 600 according to ASME 16.47 Serie B.
- 6) DN 25 ... DN 200 (1 ... 8 in.) Hard Rubber
- 6a) Available from DN25-400 with Hardrubber or ETFE
- 6b) Upon Request
- 7) Available from DN 1000 (40 in.)
- 8) Available from DN25-1000. With Tungsten-Carbide electrode only
- 9) Available from DN25-1000
- 10) Available from DN3-200
- 11) Available from DN25
- 12) Available from DN50
- 13) Available from DN10-600
- 14) Available from DN25-300
- 15) Material: Refer to data sheet. Available with Design Level A
- 16) Available from DN10-400
- 17) TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 18) Grounding electrodes, material same as measuring electrodes material
- 19) Grounding electrodes, material same as measuring electrodes material TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 20) Available with sensor size <= DN 600 (24 in.) and PTFE / Thick-PTFE / ETFE / PFA liner material. For material, refer to data sheet
- 21) Current output (active or passive) can be configured on site
- 22) Will be specified by ABB
- 23) Available with 5points Calibration
- 24) Not available with size DN 3-8 and > DN900. 0,2% calibration assumes 3 calibration points. If more than 3 calibration points are required, specify 5 points under 'Number of test points'.
- 25) 2 points calibration is Standard. If more than 2 test points are required, please specify 3 or 5 points with option 'Number of Test points'. Accuracy = 0.4 % of rate with size > DN 3
- 26) 3 or 5 test points to be specified
- 27) Maximum fluid temperature with standard sensor design:
 - 130 °C (266 °F) with PTFE, PFA, ETFE
 - 80 °C (194 °F / 176 °F) with hard rubber
 - 60 °C (140 °F) with soft rubber
- 28) Max. fluid temperature with high temperature sensor design:
 - 180 °C (356 °F) with PFA, Thick PTFE.
 - 130 °C (266 °F) with ETFE, PTFE liners.
 Thick PTFE available for sensor size DN 25 ... DN 300. PFA available for sensor size DN 10 ... DN 200
- 29) Not available with calibration acc to ISO17025
- 30) Available from DN700 and up from China production site
- 31) Not available with Ex
- 32) Available up to DN300 (12")
- 33) SIL available with Housing Type Code "D1" or "D2"

Notes for ProcessMaster FEP632

- 1) For China production site only.
- 2) Flange DN 15 ... 600 according to ASME B16.5. Flange > DN 600 according to ASME 16.47 Serie B.
- 3) DN 25 ... DN 200 (1 ... 8 in.) Hard Rubber
- 4) Available from DN 1000 (40 in.)
- 5) Available from DN25-1000. With Tungsten-Carbide electrode only
- 6) Available from DN25-1000
- 6a) Available from DN25-400 with Hardrubber or ETFE
- 6b) Upon Request
- 7) Available from DN3-200
- 8) Available from DN25
- 9) Available from DN50
- 10) Available from DN10-600
- 11) Available from DN25-300
- 12) Material: Refer to data sheet. Available with Design Level A
- 13) Available from DN10-400
- 14) TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 15) Grounding electrodes, material same as measuring electrodes material
- 16) Grounding electrodes, material same as measuring electrodes material TFE Electrode for detection of partial filling, available from DN 50 (2 in.)
- 17) Available with sensor size <= DN 600 (24 in.) and PTFE / Thick-PTFE / ETFE / PFA liner material. For material, refer to data sheet
- 18) Only available with remote transmitter, sealing compound (optional) D141B038U01
- 19) Only available with remote transmitter
- 20) Will be specified by ABB
- 21) Available with 5 points Calibration
- 22) 50 Hz (to be specified in case no Tx is ordered)
- 23) 60 Hz (to be specified in case no Tx is ordered)
- 24) Not available with size DN 3-8 and > DN800. 0,2% calibration assumes 3 calibration points. If more than 3 calibration points are required, specify 5 points under 'Number of test points'.
- 25) 2 points calibration is Standard. If more than 2 testpoints are required, please specify 3 or 5 points with option 'Number of Testpoints'. Accuracy = 0.4 % of rate with size > DN 3
- 26) 3 or 5 testpoints to be specified
- 27) Max. fluid temperature with standard sensor design:
 - 130 °C (266 °F) with PTFE, PFA, ETFE
 - 80 °C (194 °F / 176 °F) with hard rubber
 - 60 °C (140 °F) with soft rubber
- 28) Max. fluid temperature with high temperature sensor design:
 - 180 °C (356 °F) with PFA, Thick PTFE. Thick PTFE available for sensor size DN 25 ... DN 300. PFA available for sensor size DN 10 ... DN 200
 - 130 °C (266 °F) with ETFE, PTFE liners.
- 29) Not available with calibration acc to ISO17025
- 30) Available from DN700 and up from China production site
- 31) Not available with Ex
- 32) Available up to DN300 (12")
- 33) Not available with EX Zone 1, Div 1
